SUMMARY

Junior full-stack developer with a backend focus (Node.js, Express, PostgreSQL, React). Built and deployed a session-authenticated REST API backed by 111+ automated integration tests. B.Sc. in Computer Science & Engineering (GPA 3.72/4.0). Open for remote jobs.

EDUCATION

Daffodil International University *Dhaka, Bangladesh*

B.Sc. in Computer Science & Engineering *Jan. 2026*

- GPA: 3.72/4.0
- Relevant coursework: Data Structures & Algorithms, Object Oriented Programming, AI/ML

PROJECTS

My Movie Diary | *React, Vite, Node.js, Express.js, PostgreSQL (Supabase), Passport.js* *Aug. 2026*

Live Demo | GitHub Repository

- Built and deployed a RESTful API (Node.js/Express, 11 endpoints) on Supabase-hosted PostgreSQL, consumed by a React/Vite frontend.
- Implemented authentication with PostgreSQL-backed sessions (httpOnly, secure, sameSite cookies), bcrypt hashing (15 salt rounds) and Google OAuth 2.0 via Passport.js; unauthenticated requests to movie routes return 401.
- Added rate-limiting middleware (100 requests per 15 minutes) to throttle repeated requests.
- Designed a relational schema (users, movies, sessions) with parameterized queries scoped to the signed-in user; the movie-list endpoint responds in ~99 ms (warm, Chrome DevTools).
- Integrated the OMDb API for poster lookup with a fallback poster; blocked duplicate entries with a case-insensitive check returning 409 Conflict.
- Wrote 111+ integration tests (Vitest, Supertest) against an isolated PostgreSQL test database, with a guard that refuses to run on non-test databases; covered authentication, authorization, validation, CRUD and error handling, and mocked the OMDb API to test fallback and network failures.
- Verified security behavior: other users' records return 404 and stay unchanged, mass-assignment on userid is ignored, and database failures return a generic 500 without leaking internals.
- Deployed to Render with production CORS, environment-based configuration and SPA routing.

First Cost | *JavaScript, Object-Oriented Programming, MVC, Chart.js* *Jun. 2026*

Live Demo | GitHub Repository

- Built a client-side personal finance tracker in an MVC architecture: a model, a controller and 10 view classes extending a shared base Views class.
- Implemented multi-account tracking with 3 transaction types, filtering by 3 criteria, a 4-metric dashboard and 2 Chart.js charts, persisted in localStorage; deployed to GitHub Pages with a single-command Parcel build.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), SQL, HTML, CSS
Backend: Node.js, Express.js, RESTful APIs, session-based authentication, OAuth 2.0 (Passport.js), bcrypt, CORS, rate limiting, third-party API integration
Databases: PostgreSQL, relational schema design, parameterized queries, Supabase
Frontend: React, Vite, Chart.js
Testing: Vitest, Supertest, React Testing Library, integration testing, API mocking
Tools: Git, GitHub, Postman, Render, Chrome DevTools
Concepts: Object-Oriented Programming, MVC, Data Structures & Algorithms

ADDITIONAL

AWS Cloud Practitioner Essentials (training course) *Sept. 2026*
